

Idler Sprockets

For more than 75 years Lutco has been one of the most trusted names in bearings, flanges, stamped sprockets, and custom assemblies for the agricultural industry.

Lutco's high quality idler sprockets feature a separate split outer race internal to the sprocket assembly, resulting in a more robust design than competitors' parts— which often have issues with separation of the sprocket halves.

The sprocket halves are hardened for wear resistance, and all Lutco products are proudly made in the USA.
